Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

SCENARIO

Requesting, approving, fulfilling, and receiving a standard laptop through an automated workflow

Entice
How does someone initially become aware of this process?

Enter
What do people experience as they begin the process?

Engage
In the core moments in the process, what happens?

Exit
What do people typically experience as the process finishes?

Extend
What happens after the experience is over?

Steps
What does the person (or group) typically experience?

Realize laptop need	Open service portal	Search the catalog	Browse standard models	View item details	Start the request	Fill in request form	Review & submit	Request confirmation	Approval notice	Flow is triggered	Approval & stock check	Order & fulfil	Laptop delivered	Request closed	Prompt for feedback	Asset in user profile	Reporting & insights	Refresh reminders	Flow improvements
New joiners, replacements and refreshes are the most common reasons employees need a standard laptop	An employee navigates to the IT service portal from the intranet or the mobile app	The employee searches for or browses to the Standard Laptop Order catalog item	The employee sees the pre-approved standard laptop models and configurations	After choosing a model, the employee views its specs, estimated delivery time and approval details	After deciding on a model, they click the Order Now button	They enter delivery location, cost center and business justification, then continue	They see a summary of the order they are about to place, then confirm and submit	An email and portal message immediately confirm the request and share the request number	The manager is notified to approve and the requester is told the approval is pending	Flow Designer starts automatically as soon as the request is submitted, with no manual step	The flow routes approval to the manager and checks inventory for the requested model	The flow creates the purchase order or fulfilment task and assigns it to the IT team	The laptop is shipped or made ready for pick-up and the requester is notified	The flow updates the asset record and closes all related tasks automatically	One day after delivery, an email and portal notification ask for a satisfaction rating	The new laptop appears in the employee's assigned assets with its details	Order data feeds dashboards showing request volumes, cycle times and stock levels	The flow tracks the laptop's lifecycle and prompts a refresh when it is due	Feedback and metrics help the team refine the flow and add more standard items

Interactions
What interactions do they have at each step along the way?

- **People:** Who do they see or talk to?
- **Places:** Where are they?
- **Things:** What digital touchpoints or physical objects would they use?

Realize laptop need	Open service portal	Search the catalog	Browse standard models	View item details	Start the request	Fill in request form	Review & submit	Request confirmation	Approval notice	Flow is triggered	Approval & stock check	Order & fulfil	Laptop delivered	Request closed	Prompt for feedback	Asset in user profile	Reporting & insights	Refresh reminders	Flow improvements
Employee's device, email or onboarding checklist New joiners are usually pointed to the portal by HR or their manager	IT service portal on the web or mobile app	Service Catalog section of the portal	Service Catalog section of the portal Models are shown as a simple list; no ticket to IT is needed	Catalog item page on the portal	Catalog item page on the portal	Request form within the portal	Order summary screen within the portal	Employee's email (software like Outlook or website like Gmail) and portal notification	Manager's email and approval inbox Requester's request status page on the portal	Flow Designer (runs in the background) No direct interaction is needed from the employee	Manager approves in email or on the portal Inventory checked in the asset and stock records	IT fulfilment team's task list Vendor or procurement system	Delivery location or IT desk IT technician or courier	Flow Designer and asset records	Employee's email and portal notification	My Assets section of the profile on the portal	Reports and dashboards for IT managers	Email and portal notification to the employee	Flow Designer and team review meetings IT admins, developers and stakeholders

Goals & motivations
At each step, what is a person's primary goal or motivation? ("Help me..." or "Help me avoid...")

Realize laptop need	Open service portal	Search the catalog	Browse standard models	View item details	Start the request	Fill in request form	Review & submit	Request confirmation	Approval notice	Flow is triggered	Approval & stock check	Order & fulfil	Laptop delivered	Request closed	Prompt for feedback	Asset in user profile	Reporting & insights	Refresh reminders	Flow improvements
Help me get a working laptop quickly	Help me find the right place to request it	Help me find the laptop item without searching around	Help me see which models I am allowed to choose	Help me understand the specs and delivery time	Help me commit to this choice	Help me fill in the form without hassle	Help me feel confident that my request is correct	Help me feel confident that my request is submitted and tell me what happens next	Help me know my manager has been asked and how long it will take	Help me avoid manual work and delays	Help me avoid approvals that get forgotten	Help me avoid ordering out-of-stock or wrong items	Help me get my laptop ready to use	Help me avoid extra paperwork after delivery	Help me share feedback easily	Help me see what has been assigned to me	Help me see where the process is slow	Help me avoid working on an outdated laptop	Help me improve the process over time

Positive moments
What steps does a typical person find enjoyable, productive, fun, motivating, delightful, or exciting?

Realize laptop need	Open service portal	Search the catalog	Browse standard models	View item details	Start the request	Fill in request form	Review & submit	Request confirmation	Approval notice	Flow is triggered	Approval & stock check	Order & fulfil	Laptop delivered	Request closed	Prompt for feedback	Asset in user profile	Reporting & insights	Refresh reminders	Flow improvements
			Only approved standard models are shown, so choices are simple	Clear specs and delivery estimates build trust	Excitement about getting a new laptop	Form is short and asks only what is needed		Instant confirmation with a request number		No manual ticket creation: the flow starts on its own	Automatic approval routing saves time	Standard orders skip manual quotes and long email chains	Laptop arrives ready to use	Request closes without any extra effort		Employees like seeing their assets in one place	IT managers get clear reports easily		

Negative moments
What steps does a typical person find frustrating, confusing, angering, costly, or time-consuming?

Realize laptop need	Open service portal	Search the catalog	Browse standard models	View item details	Start the request	Fill in request form	Review & submit	Request confirmation	Approval notice	Flow is triggered	Approval & stock check	Order & fulfil	Laptop delivered	Request closed	Prompt for feedback	Asset in user profile	Reporting & insights	Refresh reminders	Flow improvements
		People may search with the wrong keywords and miss the catalog item	Some employees are unsure which standard model suits their role				Worry about whether the justification will be accepted		Managers may miss the approval email, delaying the request		Approvals can stall if the manager is on leave	Out-of-stock models cause delays in delivery	Delivery to remote employees can take longer than expected		Low survey response rates due to survey fatigue			Employees often forget when their laptop is due for a refresh	

Areas of opportunity
How might we make each step better? What ideas do we have? What have others suggested?

Realize laptop need	Open service portal	Search the catalog	Browse standard models	View item details	Start the request	Fill in request form	Review & submit	Request confirmation	Approval notice	Flow is triggered	Approval & stock check	Order & fulfil	Laptop delivered	Request closed	Prompt for feedback	Asset in user profile	Reporting & insights	Refresh reminders	Flow improvements
		Could we suggest the laptop item automatically based on the employee's role?	Provide a simple comparison summary to avoid choice overload			Could we pre-fill the form with the employee's details?			How might we send automatic reminders or escalate to a delegate if approval is pending?		How might we auto-approve low-cost standard requests?	Could we show live stock levels before the request is submitted?	How might we give the requester real-time delivery tracking?		How might we keep the feedback survey to a single question?			How might we remind people before their laptop reaches end of life?	How might we extend the flow to other standard items like monitors and phones?
